ATTEN Soldering Iron
User Manual
ST-2065D/ST-2080/ST-2080D/ST-2150/ST-2150D

The soldering iron needs to be tested before it leaves the factory, so the soldering tip may cover a small amount of tin, and the casing will be slightly yellowing, which is a normal phenomenon.

3. Safety Precautions

![Warning]
Misuse of this product may lead to serious injury or death to the user.

![Caution]
Misuse of this product may lead to serious injury to the user or material damage to the object involved.

To avoid electric shock or injury to the human body or fire hazard, the following basic rules must be observed when using the equipment. In order to ensure personal safety, only parts and accessories approved or recommended by the original factory can be used, otherwise serious consequences may occur!

- Keep this product away from flammable materials.
- Do not use this product if you are inexperienced or have no sufficient necessary knowledge without the guidance of related personnel.
- Do not use this product under wet environment or with wet hands to avoid electric shock.
- Do not modify this product and its accessories without authorization.
- Please turn off the power when replacing parts and iron tips, and do not resume the use until the equipment is completely cooled down.
- Please use the accessories from the original factory when replacing the product parts.
- Make sure to turn off the power switch when the equipment is temporarily stopped or out of use.

4. Product Overview

This product is a portable, temperature-adjustable, high-temperature control soldering iron. The ceramic heating core uses a three-core grounded power cable to effectively ensure the safety of the welding operation.

5. Features

- Automatically sleep after 10 minutes and shut down after 20 minutes when the product stops operating.
- Products use LCD display and LED display design.
- Build in PID system, adjust temperature by button, operate easily.
- The handle structure is ergonomically designed for comfortable grip.
- Display the temperature control status with a bright blue LED.
- The heating wire and sensor are made of PTC material, which is quick in temperature rise and precise in temperature control.
- Auto-standby, auto-shutdown is available.
- Using 3 core power cable.

Operational Guide

A. Switch Function

Charge on the product, short press power button. When booting, the screen display the temperature, as shown in picture 1; when shutdown, the screen display OFF, as shown in picture 2.

B. 9 groups shortcut temperature adjustment

C. Setting mode

Normal working mode → Quick temperature adjustment → Temperature compensation adjustment

Back to normal working mode → Auto-sleep function setting → Temperature unit switching

(1) Quick temperature adjustment
While in the working state, hold down the power button to enter the quick temperature adjustment, press the “+” “-” button to adjust. Hold down the button to adjust the range at larger intervals: 80°C-480°C.

(2) Temperature compensation adjustment
In the fast temperature adjustment state, press the power button to enter the temperature compensation setting, press “+” “-” to adjust. Hold the button to adjust the range at larger intervals: ±50°C / ±90°F.

(3) Temperature unit switching
In the temperature compensation adjustment state, short press the power button to enter the unit setting, press “+” “-” to switch C and F.

(4) Auto-sleep function ON/OFF
In the temperature unit switching state, short press the power button to enter the sleep setting. Press “+” “-” adjust, 1 means ON, 0 means OFF.

Operational Guide

A. Booting
Short press power button to boot, default 390°C lights long after booting.

B. Temperature switching
In the working state, short press “+” “-” to switch temperature.

C. Shutdown
In the working state, short press power button, the light of power button flashing after shutdown.

D. Heating
When the product is heated. The power light flashes, the brightness changes according to the power level, and the selected gear light is long.

E. Warning
When “H-E” displayed on the screen, there is no temperature, which indicates that the heating element fails.
When “S-E” displayed on the screen, there is a fault in sensor, which signifies that there is something wrong in sensor or the related circuit of the sensor.
